# PLASTIC LIGHT TRAP

- **High Light Reduction**  
Black-out tested at BESS Labs at a light reduction factor of 28,000,000:1.
- **Low Air Flow Resistance**  
Less area required to maintain good ventilation rates and lower fan operating pressures.
- **High Corrosion Resistance**  
Plastic profiles with painted galvanized steel frame provide years of maintenance free service.
- **Low Cost Installation**  
Designed to facilitate ease of installation.
- **Streamline Baffles**  
Reduces the chance for clogging air passage.
- **Special Application Sizes**  
Special sizes for Fan-Jets and perimeter inlets available.
- **Existing Building Application**  
No additional or extra horsepower required.
- **Vertical Baffles**  
Allows for simple cleaning.

- ☉ **LIGHT TRAPS FOR INLETS** - should be selected at 500 fpm velocity.  
 Example: Total CFM for inlet is 100,000 cfm  
 $100,000 \div 500 = 200$  sq. ft.  
 10 - LTP4860 = 200 sq. ft. Or approx. 4' x 50' opening  
 or two 4' x 25' openings.

- LIGHT TRAPS FOR EXHAUST FANS** - should be selected at 750 fpm velocity and the smallest dimension of the light trap should not be less than the dimension of the inlet to the fan.  
 Example: DC48J = 19,000 CFM @ .125" S.P.  
 $19,000 \div 750 = 25$  sq. ft. of light trap.  
 LTPF6060 = 25 sq. ft. and is 60" x 60" for a 48" fan.
